

E1.2.8 AF Review Report

Status: local/Codex output approved for review packet

FACT

- Private source files were read from the ArchFlow root.
- Public output files contain only sanitized English summaries and derived artifacts.
- Local/Codex run used MODEL_PROVIDER=none.
- OpenRouter status: completed_review_gated.
- OpenRouter selected model: qwen/qwen3.6-plus through yushchenko.source_scope_gate.
- OpenRouter estimated spend: about 0.00794 USD.

INTERPRETATION

The local run satisfies the requested E1.2.8 local PRD/PDF package. It does not replace the June 26 E1.2 proof; it extends E1.2 with a source-specific testmeeting package.

HYPOTHESIS

The strongest buyer-facing interpretation is a PRD automation service that turns release/discovery operating discussion into a coherent release kickoff and discovery-to-delivery handoff PRD.

GAP

- Owner acceptance is needed before E1.2 can be marked Done.
- OpenRouter output remains a separate review-gated comparison until AF Review and owner acceptance.
- Railway hosted runtime remains E1.7, not part of this local run.

Safety Verdict

Approved for public repo storage as sanitized derived output. Not approved for publishing as customer proof, paying-demand proof, or provider-backed runtime proof.
