

E1.2 Streaming Report

Date: 2026-06-26

Status: approved internal public-safe proof

Source: project/runs/E1.2/2026-06-26-full-test/e1_2_stream_events.jsonl

Streaming Boundary

This report saves observable graph execution events, node-level state changes, output assignments, and public-safe decision summaries. It does not save hidden chain-of-thought. For future live runs, the same rule applies: stream node names, state deltas, tool results, warnings, and review decisions, not private reasoning text.

Run Summary

Field	Value
Graph	e1_2_full_test
Run ID	e1_2_full_test_2026_06_26
Source packet	sanitized_e1_2_public_setup_review
Stream mode	updates
Stream events	11
Approval status	approved
Hidden reasoning stored	no

Blockschema

```
START
-> intake_validate
-> retrieve_context
  => parallel:
    analyze_architecture
    analyze_runtime
    analyze_knowledge
    analyze_agents
    analyze_trends
-> merge_findings
-> draft_documents
-> review_gate
  => approved -> publish_or_record -> END
  => blocked -> END
```

Node Sequence

Order	Node	Purpose	Output Signal
1	intake_validate	Check source packet and public boundary.	source_boundary_status=pass

Order	Node	Purpose	Output Signal
2	retrieve_context	Select approved public context.	Workflow, WikiLLM, and Graphify paths selected.
3	analyze_agents	Review role setup and model policy.	Agent roles mapped; temperature policy recommended.
4	analyze_architecture	Review LangGraph/CrewAI/LlamaIndex split.	Checkpointter recommended before real interrupts.
5	analyze_knowledge	Review WikiLLM, Graphify, Obsidian, Nexus.	WikiLLM canonical; Nexus remains planned.
6	analyze_runtime	Review smoke checks and runtime state.	CrewAI LLM execution remains gated.
7	analyze_trends	Review current technical direction.	Stream state/custom progress, not hidden reasoning.
8	merge_findings	Merge parallel branch outputs.	Five integrated findings produced.
9	draft_documents	Assign report output paths.	PRD, streaming, system, task, KB paths assigned.
10	review_gate	Approve, revise, or block.	Approved.
11	publish_or_record	Mark artifacts ready for rendering and Git validation.	Final state ready.

Stream Event Extract

```
{
  "index": 1, "node": "intake_validate", "signal": "sanitized E1.2 source packet accepted"
},
{
  "index": 2, "node": "retrieve_context", "signal": "approved public corpus and setup memory selected"
},
{
  "index": 3, "node": "analyze_agents", "signal": "agent roles are mapped but execution stays supervised"
},
{
  "index": 4, "node": "analyze_architecture", "signal": "LangGraph remains the control spine"
},
{
  "index": 5, "node": "analyze_knowledge", "signal": "WikiLLM is canonical public memory"
},
{
  "index": 6, "node": "analyze_runtime", "signal": "runtime checks remain deterministic and public-safe"
},
{
  "index": 7, "node": "analyze_trends", "signal": "current docs favor typed streaming and observability"
},
{
  "index": 8, "node": "merge_findings", "signal": "parallel branch outputs merged into E1.2 report pack"
},
{
  "index": 9, "node": "draft_documents", "signal": "E1.2 PRD, streaming report, and system report paths assigned"
},
{
  "index": 10, "node": "review_gate", "signal": "approved for public-safe internal E1.2 proof package"
},
{
  "index": 11, "node": "publish_or_record", "signal": "run artifacts ready for PDF rendering and Git validation"
}
```

Parallel Process Analysis

Branch	Role	Finding	Config Recommendation
Architecture	AF Architecture Review	LangGraph should own route, state, parallel fan-out, and gates.	Add checkpointter before real human approval interrupts.
Runtime	AF Runtime Debug	Runtime checks are deterministic and public-safe.	Keep CrewAI LLM execution behind LangGraph review.
Knowledge	AF Knowledge	WikiLLM is canonical; Graphify is generated reference.	Keep Nexus planned until live vault readiness is verified.
Agent setup	AF Manager	Agent roles exist and execution is still supervised.	Add explicit temperature and model policy by role.

Branch	Role	Finding	Config Recommendation
Technical tendencies	Technical Trends Analyst	Current agent systems emphasize typed streaming, persistence, RAG, role tasks, and tracing.	Stream public state and progress, not hidden reasoning.

LangGraph Output Summary

```
{
  "approval_status": "approved",
  "stream_event_count": 11,
  "source_boundary_status": "pass",
  "parallel_branches": [
    "analyze_architecture",
    "analyze_runtime",
    "analyze_knowledge",
    "analyze_agents",
    "analyze_trends"
  ],
  "safety": "public-safe sanitized state only; no hidden reasoning persisted"
}
```

Failed, Skipped, Or Deferred Steps

Step	Status	Reason
Raw transcript ingestion	blocked	Public-safety boundary.
Hidden chain-of-thought logging	blocked	Not safe or needed for operational review.
CrewAI LLM task execution	deferred	Needs LangGraph wrapper and review gate.
Nexus live write	deferred	Vault target and schemas are not verified.
Vector retrieval	deferred	Keyword retrieval is enough for the first proof.

Review Gate Result

Approved for internal public-safe E1.2 proof package. Not approved as customer-facing demand validation.

Next Actions

- Use this stream event pattern for future LangGraph runs.
- Add persistent checkpointing before real interrupted/human approval flows.
- Add UI or dashboard stream display only after one full artifact-generating graph is stable.
